Weather of Concern

- The National Weather Service is predicting Santa Ana winds will be strongest Monday and Tuesday, with temperatures peaking near or above 100 degrees.
 - The gusty winds, very low relative humidity, hot temperatures, and extremely dry fuels will result in extreme fire danger as fuel moisture levels are critically low.
 - The greatest concern will be in areas of Los Angeles and Ventura Counties that are prone to Santa Ana winds, however most of the area will experience elevated fire danger.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

A bit of cloudiness and perhaps a few light showers will be lingering over the far northern areas of the region today while sunny skies are elsewhere. A sharp warming trend will be underway over the region for the next few days as strong high pressure moves into the region with afternoon highs about 10 degrees warmer than the day before today and Monday. Sunny, dry, and unseasonably warm conditions will prevail over the region Tuesday through next weekend. Afternoon high temperatures will generally be quite a bit above seasonal normals by 10 to almost 20 degrees in most locations with the warmest inland areas around 90 early this week followed by something of a cooling trend starting Wednesday. Much lower relative humidity (RH) will return to the region and then continue as well.

There will be some light to locally moderate gusty N to NE/offshore winds develop tonight and continue into Tuesday for areas from the far southern Cascade and Sierra crests westward to some coastal locations. The windiest spots will likely see peak gusts around 30-35 mph at times, but these locations will be rather isolated. Most of the windy places will see peak gusts of 25-30 mph. The wind will help lower RH quite a bit overall as well. Lighter NW to NE winds are expected the rest of the week through next weekend.

SOUTHERN CALIFORNIA

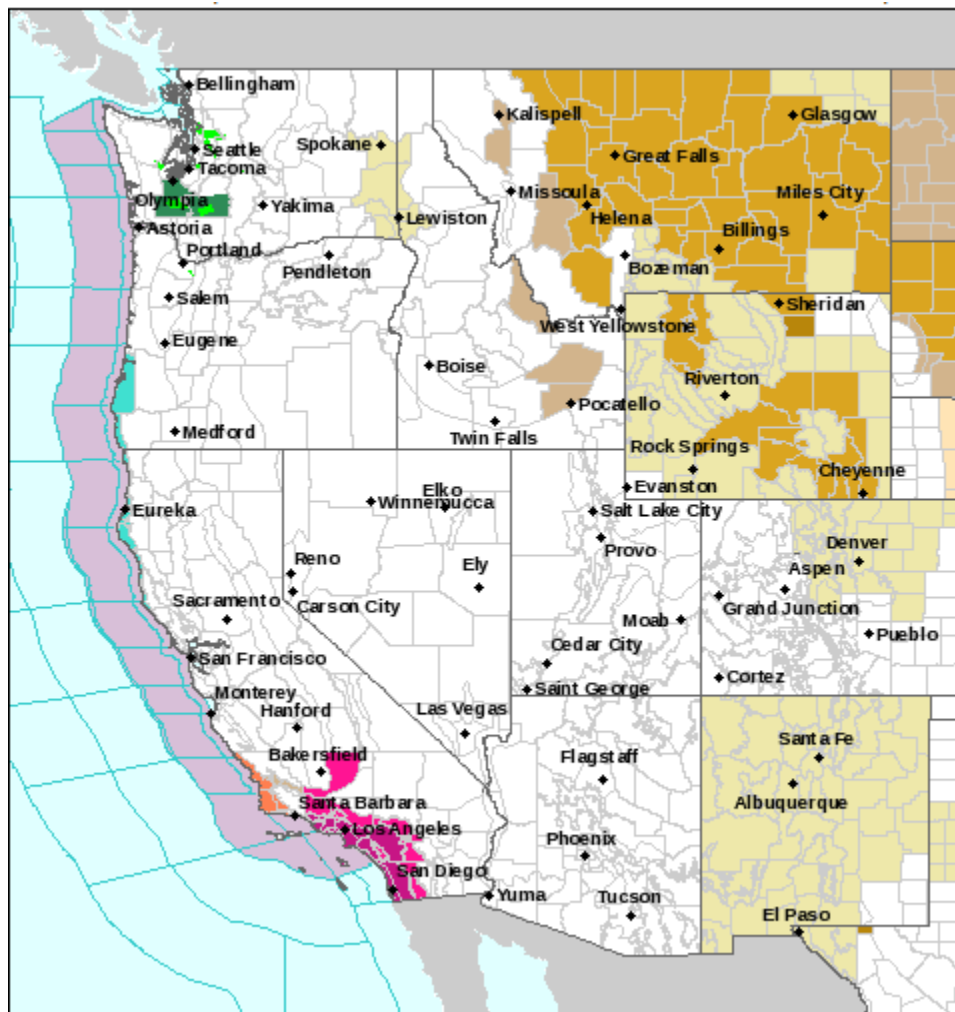

*****Gusty offshore winds across Southern California Monday and Tuesday*****

*****Hot and very dry Monday and Tuesday*****

Strengthening high pressure aloft over California will bring significant warming to the region through Monday, with record heat Monday and Tuesday. Maximum temperatures will be in the mid 60s to mid 70s across the mountains, mid 70s to mid 80s in the Central California valleys, and upper 80s and 90s in the Southern California valleys today. On Monday and Tuesday, maximum temperatures will be in the 70s to low 80s across the mountains, 80s to mid 90s in the Central California valleys, and upper 90s to 105 in the Southern California valleys. There will be local offshore winds of 10 to 20 mph with gusts to 35 mph across Southern California today and then offshore winds will increase to 15 to 30 mph with gusts to 50 mph and become more widespread across Southern California Monday morning through Tuesday afternoon. Winds will become light across the region on Wednesday. High pressure aloft will weaken and shift off the coast bringing around 5 degrees of cooling each day Wednesday through the end of this week. Minimum humidity will be mainly in the single digits and teens through the end of this week.
